This listing of claims will replace all prior versions, and listings, of claims in the

application.

Listing Of Claims:

Claim 1 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container, which cargo is subject to shifting forces

during transport, said load restraint-restraining strip comprising:

a first, cross-weave layer of reinforcement material having a first side and a

second side and being composed of,

substantially parallel longitudinal strands extending along the length of

said restraining strip, and

crossing strands interwoven with said substantially parallel longitudinal

strands to produce said cross-weave layer of reinforcement material;

a first adhesive layer having a first side and a second side and coextensively

extending along, coating and bonding to a-said second side of said cross-weave

material;

Page 9 of 35

a second, parallel strand layer of reinforcement material having a first side and a

second side, wherein said second surface side of said first adhesive layer is

bonded to said first surface side of said second, parallel strand layer of

reinforcement material;

a second layer of adhesive having a first side and a second side and at least

partially extending along and coating a portion of said second side of said second

strand layer of reinforcement strands material; and

a release paper extending coextensively with and releasably adhered to the second

surface side of said second layer of adhesive, wherein said release paper may be

removed from said second layer of adhesive on site and said load restraining strip

releasably affixed to an interior surface of a cargo transport container such that

said load restraining strip may be used as a flexible securement element to secure

cargo within a transport container.

Claim 2 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 1 wherein said first, cross-

weave layer of reinforcement material is formed such that:

Page 10 of 35

spacing between next adjacent ones of said crossing strands of said cross-weave

layer of reinforcement material is approximately twice as great as the spacing

between next adjacent strands of ones of said substantially parallel longitudinal

strands.

Claim 3 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 1 wherein said first, cross-

weave layer of reinforcement material further comprises:

a pliant coating applied to said first and an outer surface of said cross-weave

material.

Claim 4 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 3 wherein said pliant

coating comprises:

a layer of Mylarbiaxially-oriented polyethylene terephthalate polyester film.

Claim 5 (original): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 1 wherein said first adhesive layer

includes:

Page 11 of 35

a spun bonded polyester substrate located generally centrally within said first

adhesive layer.

Claim 6 (original): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 1 wherein:

said substantially parallel longitudinal strands of said cross-weave layer

comprises a plurality of finer denier fibers of reinforcement material.

Claim 7 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 6 wherein:

each of said strands of second, parallel strand layer of reinforcement material

comprises comprise a plurality of finer denier fibers of reinforcing material.

Claim 8 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 6 or 7, wherein said finer

denier fibers are composed of:

polyester.

Claim 9 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 6 or 7, wherein said finer

denier fibers are composed of:

Page 12 of 35

polypropylene.

Claim 10 (currently amended): A cross-weave load restraining strip for use in securing cargo within a transport container as defined in claim 6 or 7, wherein said finer denier fibers are composed of:

polyethylene.

Claim 11 (currently amended): A cross-weave load restraining strip for use in securing cargo within a transport container as defined in claim 6 or 7, wherein said finer denier fibers are composed of:

polyolefin.

Claim 12 (currently amended): A cross-weave load restraining strip for use in securing cargo within a transport container as defined in claim 6 or 7, wherein said finer denier fibers are composed of:

glass fiber.

Claim 13 (currently amended): A cross-weave load restraining strip for use in securing cargo within a transport container as defined in claim 6 or 7, wherein said finer denier fibers are composed of:

an aramid.

Claim 14 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 6 or 7, wherein said finer

denier fibers are composed of:

carbon fibers.

Claim 15 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 6 or 7, wherein said finer

denier fibers are composed of:

Kevlar polyamide fibers with amide groups separated by para-phenylene groups.

Claim 16 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 6 or 7, wherein said finer

denier fibers are composed of:

a combination of at least two different fibers selected from the group consisting of

a polyester, polypropylene, polyethylene, polyolefin, glass fiber, aramid, carbon

fiber and Kevlar polyamide fibers with amide groups separated by para-phenylene

groups.

Page 14 of 35

Claim 17 (currently amended): A laminated load restraining strip for use in

securing cargo within a transport container as defined in claim 1, wherein said second

layer of adhesive includes:

a substrate material having a first side and a second side;

a first course of adhesive covering said first side of said substrate material and

adhered to said second side of said second, parallel strand layer of reinforcement

material; and

a second course of adhesive covering said second side of said substrate material

and being operable for adhering contact with an interior surface of a cargo

transport container.

Claim 18 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 17, wherein said substrate

material comprises:

a strip of Mylar biaxially-oriented polyethylene terephthalate polyester film

material.

Claim 19 (currently amended): A cross-weave load restraining strip for use in

securing cargo within a transport container as defined in claim 17, wherein:

Page 15 of 35

said first course of adhesive of said second layer of adhesive is thicker

than said second course of adhesive of said third layer of adhesive.

Claims 20 – 22 (canceled) Cancel claims 20-22, without prejudice to filing a

divisional application, pursuant to a requirement for restriction levied on January 3, 2005

and not withdrawn in the outstanding Office Action.

Claim 23 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container, which cargo is subject to shifting forces during transport,

said load restraining strip comprising:

a first, cross-weave layer of reinforcement material having a first side and a

second side and being composed of,

substantially parallel longitudinal strands extending along the length of

said restraining strip, and

transverse crossing strands interwoven with said substantially parallel

longitudinal strands to produce said cross-weave layer of reinforcement

material;

Page 16 of 35

a first adhesive layer having a first side and a second side and said first side of

said first layer of adhesive coextensively extending along, coating and bonding to

said second side of said cross-weave material;

a second, parallel strand layer of reinforcement material having a first side and a

second side, wherein said second side of said first adhesive layer is bonded to said

first side of said second, parallel strand layer of reinforcement material;

a second layer of adhesive having a first side and a second side and at least

partially extending along and coating a portion of said second side of said second

strand layer of reinforcement material; and

a release paper extending coextensively with and releasably adhered to the second

side of said second layer of adhesive, wherein said release paper may be removed

from said second layer of adhesive on site and said load restraining strip

releasably affixed to an interior surface of a cargo transport container such that

said load restraining strip may be used as a flexible securement element to secure

cargo within a transport container.

Claim 24 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 23 wherein said first, cross-weave layer

Page 17 of 35

of reinforcement material is formed such that:

spacing between next adjacent ones of said transverse crossing strands of said

cross-weave layer of reinforcement material is approximately twice as great as

spacing between next adjacent strands of ones of said substantially parallel

longitudinal strands.

Claim 25 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 23 wherein said first, cross-weave layer

of reinforcement material further comprises:

a pliant clear coating applied to an outer surface of said cross-weave material.

Claim 26 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 25 wherein said pliant coating comprises:

a layer of biaxially-oriented polyethylene terephthalate polyester film.

Claim 27 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 23 wherein said first adhesive layer

includes:

Page 18 of 35

a spun bonded polyester substrate located generally centrally within said first

adhesive layer.

Claim 28 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 23 wherein:

said substantially parallel longitudinal strands of said cross-weave layer

comprises a plurality of finer denier fibers of reinforcement material.

Claim 29 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 28 wherein:

said strands of second, parallel strand layer of reinforcement material comprise a

plurality of finer denier fibers of reinforcing material.

Claim 30 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 28 or 29, wherein said finer denier fibers

are composed of:

a combination of at least two different fibers selected from the group consisting of

a polyester, polypropylene, polyethylene, polyolefin, glass fiber, aramid, carbon

Page 19 of 35

fiber and polyamide fibers with amide groups separated by para-phenylene

groups.

Claim 31 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 23, wherein said second layer of adhesive

includes:

a substrate material having a first side and a second side;

a first course of adhesive covering said first side of said substrate material and

adhered to said second side of said second, parallel strand layer of reinforcement

material; and

a second course of adhesive covering said second side of said substrate material

and being operable for adhering contact with an interior surface of a cargo

transport container.

Claim 32 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 39, wherein said substrate material

comprises:

a strip of biaxially-oriented polyethylene terephthalate polyester film material.

Page 20 of 35

Claim 33 (new): A cross-weave load restraining strip for use in securing cargo

within a transport container as defined in claim 31, wherein:

said first course of adhesive of said second layer of adhesive is thicker

than said second course of adhesive.

Claim 34 (new): A load restraining strip for use in securing cargo within a

transport container, which cargo is subject to shifting forces during transport, said load

restraining strip comprising:

a first layer of reinforcement material having a first side and a second side and a

first edge and a second edge and being composed of substantially parallel

longitudinal strands extending along the length of said restraining strip;

a first adhesive layer having a first side and a second side and said first side of

said first adhesive layer coextensively extending along, coating and bonding to

said second side of said reinforcement material;

a second, parallel strand layer of reinforcement material having a first side and a

second side, wherein said second side of said first adhesive layer is bonded to said

first side of said second, parallel strand layer of reinforcement material;

Page 21 of 35

a second layer of adhesive having a first side and a second side and at least

partially extending along and coating a portion of said second side of said second

strand layer of reinforcement material; and

a release paper extending coextensively with and releasably adhered to the second

side of said second layer of adhesive, wherein said release paper may be removed

from said second layer of adhesive on site and said load restraining strip

releasably affixed to an interior surface of a cargo transport container such that

said load restraining strip may be used as a flexible securement element to secure

cargo within a transport container.

Claim 35 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 34 further comprising:

crossing strands extending from said first edge to said second edge of said first

side of said first layer of reinforcement material.

Claim 36 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 35 wherein:

Page 22 of 35

said crossing strands extend transversely from said first edge to said second edge

of said first side of said first layer of reinforcement material.

Claim 37 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 34 wherein said first layer of reinforcement

material further comprises:

a pliant coating applied to an outer surface of said cross-weave material.

Claim 38 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 37 wherein said pliant coating comprises:

a layer of biaxially-oriented polyethylene terephthalate polyester film.

Claim 39 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 34 wherein said first adhesive layer includes:

a spun bonded polyester substrate located generally centrally within said first

adhesive layer.

Claim 40 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 34 wherein:

Page 23 of 35

said substantially parallel longitudinal strands of said first layer of reinforcement

material comprise a plurality of finer denier fibers of reinforcement material.

Claim 41 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 40 wherein:

said strands of said second parallel strand layer of reinforcement material

comprise a plurality of finer denier fibers of reinforcing material.

Claim 42 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 40 or 41, wherein said finer denier fibers are

composed of:

a combination of at least two different fibers selected from the group consisting of

a polyester, polypropylene, polyethylene, polyolefin, glass fiber, aramid, carbon

fiber and polyamide fibers with amide groups separated by para-phenylene

groups.

Claim 43 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 34, wherein said second layer of adhesive

includes:

Page 24 of 35

a substrate material having a first side and a second side;

a first course of adhesive covering said first side of said substrate material and

adhered to said second side of said second, parallel strand layer of reinforcement

material; and

a second course of adhesive covering said second side of said substrate material

and being operable for adhering contact with an interior surface of a cargo

transport container.

Claim 44 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 43, wherein said substrate material_comprises:

a strip of biaxially-oriented polyethylene terephthalate polyester film material.

Claim 45 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 43, wherein:

said first course of adhesive of said second layer of adhesive is thicker than said

second course of adhesive.

Claim 46 (new): A load restraining strip for use in securing cargo within a

transport container, which cargo is subject to shifting forces during transport, said load

restraining strip comprising:

a first layer of reinforcement material having a first side and a second side and a

first edge and a second edge and being composed of substantially parallel

longitudinal strands extending along the length of said restraining strip;

a first adhesive layer having a first side and a second side and said first side of

said first adhesive layer coextensively extending along, coating and bonding to

said second side of said reinforcement material;

a second, parallel strand layer of reinforcement material having a first side and a

second side, wherein said second side of said first adhesive layer is bonded to said

first side of said second, parallel strand layer of reinforcement material;

a second layer of adhesive having a first side and a second side and at least

partially extending along and coating a portion of one of said first side of said first

strand layer of reinforcement material and said second side of said second strand

layer of reinforcement material; and

Page 26 of 35

a release paper extending coextensively with and releasably adhered to the second

side of said second layer of adhesive, wherein said release paper may be removed

from said second layer of adhesive on site and said load restraining strip

releasably affixed to an interior surface of a cargo transport container such that

said load restraining strip may be used as a flexible securement element to secure

cargo within a transport container.

Claim 47 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 46, further comprising:

a plurality of crossing strands interwoven with said substantially parallel

longitudinal strands of said first layer of reinforcement material to form a cross-

weave layer.

Claim 48 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 47 wherein said first layer of reinforcement

material is formed such that:

spacing between next adjacent ones of said crossing strands of said first layer of

reinforcement material is approximately twice as great as spacing between next

adjacent strands of ones of said substantially parallel longitudinal strands.

Page 27 of 35

Claim 49 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 46 wherein said first layer of reinforcement

material further comprises:

a pliant coating applied to an outer surface of one of said first layer of

reinforcement material and said second layer of reinforcement material.

Claim 50 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 49 wherein said pliant coating comprises:

a layer of biaxially-oriented polyethylene terephthalate polyester film.

Claim 51 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 46 wherein said first adhesive layer includes:

a spun bonded polyester substrate located generally centrally within said first

adhesive layer.

Claim 52 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 46 wherein:

Page 28 of 35

said substantially parallel longitudinal strands of said first layer of reinforcement

material comprise a plurality of finer denier fibers of reinforcement material.

Claim 53 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 52 wherein:

said strands of said second parallel strand layer of reinforcement material

comprise a plurality of finer denier fibers of reinforcing material.

Claim 54 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 52 or 53, wherein said finer denier fibers are

composed of:

a combination of at least two different fibers selected from the group consisting of

a polyester, polypropylene, polyethylene, polyolefin, glass fiber, aramid, carbon

fiber and polyamide fibers with amide groups separated by para-phenylene

groups.

Claim 55 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 46, wherein said second layer of adhesive

includes:

a substrate material having a first side and a second side;

Page 29 of 35

a first course of adhesive covering said first side of said substrate material and

adhered to said second side of said second, parallel strand layer of reinforcement

material; and

a second course of adhesive covering said second side of said substrate material

and being operable for adhering contact with an interior surface of a cargo

transport container.

Claim 56 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 55, wherein said substrate material comprises:

a strip of biaxially-oriented polyethylene terephthalate polyester film material.

Claim 57 (new): A load restraining strip for use in securing cargo within a

transport container as defined in claim 55, wherein:

said first course of adhesive of said second layer of adhesive is thicker than said

second course of adhesive.
